EDUCATION

Michigan State University | East Lansing, MI
Bachelor, Computer Science Engineering
Minor: Business

Winter 2027

EXPERIENCE

Michigan Farm Bureau Insurance | Lansing, MI

DevOps / Release management Intern

Summer 2026 - Present

- Developed Automation solutions supporting enterprise software releases and deployment workflows across multiple application environments
- Built web application and spreadsheet integration to automatically generate and populate production release-tracking data for release managers.
- Integrated automated Kafka connector pause and restart operations into CI/CD release pipelines, replacing manual deployment steps
- Supported production releases and containerization initiatives using CI/CD pipelines, Git, Docker, and Windows Server infrastructure

Imagine Software Club | East Lansing, MI

Software Engineer

Winter 2026 - Present

- Developed full-stack features using React and Supabase for early-stage startup platform
- Implemented authentication workflows and database integrations to support scalable user onboarding
- Collaborated in agile team using GitHub pull requests, code reviews, and issue tracking
- Delivered client-facing solutions aligned with business requirements and timelines

MSU Infrastructure Planning and Facilities | East Lansing, MI

Technical Assistant

Fall 2023 - Summer 2026

- Managed building automation systems across 150 campus buildings, contributing to over \$1M in annual energy savings.
- Monitored system alarms, troubleshooted operational issues, and coordinated equipment schedules to improve efficiency and prevent disruptions

PROJECTS

Alfred - Personal AI Assistant | Next.js, FastAPI, PostgreSQL, Docker

<https://github.com/gabeabenavides2/alfred>

- Developed a full-stack AI assistant with persistent conversations, authentication, long-term memory, and LLM-powered request orchestration.
- Designed a model and tool routing system to classify requests and dynamically invoke external services, memory retrieval, and AI providers.
- Built a semantic memory system using vector embeddings, multi-query retrieval, importance scoring, and duplicate detection.
- Integrated Gmail and Google Calendar tooling and containerized backend services for deployment

Personal Cloud Infrastructure | Linux, Docker, Nginx, GitHub Actions

- Built and administered a Linux VPS hosting containerized personal applications and web services
- Configured Docker, Nginx reverse proxying, HTTPS, DNS, firewall rules, and network access for production services
- Implemented GitHub Actions CI/CD workflows to automatically build and deploy applications following repository updates

Technical Skills

Languages: Python, JavaScript, TypeScript, C++, C, HTML, CSS, Assembly

Frameworks/Libraries: React, Next.js, FastAPI, SQLAlchemy, Pytest

Tools/Infrastructure: Git, GitHub, GitHub Actions, Docker, Linux, Nginx, CI/CD, REST APIs

Databases: PostgreSQL, SQLite, Supabase
