EDUCATION

Michigan State University | East Lansing, MI
Bachelor of Science in Computer Science
Minor: Business

Dec 2027

EXPERIENCE

Michigan Farm Bureau Insurance | Lansing, MI

DevOps / Release Management Intern

May 2026 - Present

- Developed automation solutions supporting enterprise software releases and deployment workflows across multiple application environments.
- Built a web application and spreadsheet integration to automate production release-tracking data.
- Integrated automated Kafka connector pause and restart operations into CI/CD release pipelines, replacing manual deployment steps.
- Supported production releases and containerization initiatives using CI/CD pipelines, Git, Docker, and Windows Server infrastructure.

Imagine Software Club | East Lansing, MI

Software Team Lead – [We Speak!](#)

Sep 2026 - Present

Software Engineer – [Arum](#)

Jan 2026 - May 2026

- Lead a 4-person team developing a client-facing language learning platform.
- Coordinate development using Jira, GitHub, pull requests, and code reviews.
- Developed full-stack React and Supabase features for an early-stage startup.
- Built authentication workflows and database integrations supporting user onboarding.

MSU Infrastructure Planning and Facilities | East Lansing, MI

Technical Assistant

Oct 2023 - May 2026

- Managed building automation systems across 150 campus buildings, contributing to over \$1M in annual energy savings.
- Monitored system alarms, troubleshooted operational issues, and coordinated equipment schedules to improve efficiency and prevent disruptions.

PROJECTS

[Alfred](#) - Personal AI Assistant | Next.js, FastAPI, PostgreSQL, Docker

- Developed a full-stack AI assistant with persistent conversations, authentication, long-term memory, and LLM-powered request orchestration.
- Designed a model and tool routing system to classify requests and dynamically invoke external services, memory retrieval, and AI providers.
- Built a semantic memory system using vector embeddings, multi-query retrieval, importance scoring, and duplicate detection.
- Integrated Gmail and Google Calendar tooling and containerized backend services for deployment.

Personal Cloud Infrastructure | Linux, Docker, Nginx, GitHub Actions

- Built and administered a Linux VPS hosting containerized personal applications and web services.
- Configured Docker, Nginx reverse proxying, HTTPS, DNS, firewall rules, and network access for production services.
- Implemented GitHub Actions CI/CD workflows to automatically build and deploy applications following repository updates.

Technical Skills

Languages: Python, JavaScript, TypeScript, C++, C, HTML, CSS, Assembly

Frameworks/Libraries: React, Next.js, FastAPI, SQLAlchemy, pytest

Tools/Infrastructure: Git, GitHub, GitHub Actions, Docker, Linux, Nginx, CI/CD, REST APIs, Jira

Databases: PostgreSQL, SQLite, Supabase
